

## Governance **by** **traders** for traders

By linking game theory and collective intelligence we aim to welcome thousands of traders, analysts and thinkers to KASH.

KIDS KASH (KASH) is an ERC20 token tied to a web and the first real trading app allowing users to swipe, upvote and downvote trading patterns.

With the rise of alternatives intelligences we see many great solutions that involve artificial intelligence being created, yet very few explore the possibilities offered by the concept of collective intelligence. Collective intelligence is shared or group intelligence that emerges from the collaboration, collective efforts, and competition of many individuals and appears in consensus decision making. The concept of collective intelligence exist in common sense, collective wisdom and intelligence assessment. While cryptocurrencies networks are collective intelligence by design there is a lack of different perspectives in the research happening in this field.

This lack of different perspectives leads to poor UI and UX. We address this and give individuals awesome tools they never saw before.

# The Tinder for Charts

## Virtual portfolio [and collective intelligence]

Users are offered the possibility to build a virtual portfolio they'll use for paper-trading. There is no complex UI, no orderbooks, no nothing : users simply swipe left or right to downvote or upvote charts. Good traders earn KASH, bad traders lose KASH. You need KASH to vote. KASH is your trader score on the platform.

People practice with skin in the game, and managed risks. The collective voting process give patterns a score reflecting the collective knowledge of the network of users.

Users can decide to trade with their real portfolio, anytime.

## Social mining

Anything has a cost. The value you provide has a cost. Users can share knowledge, informations and contents and get tipped with KASH both on the platform and any Telegram room.

The KASH earned can be then used to unlock advanced TA trading packages (custom indicators, HTF, LTF, advanced onchain data analytics tools etc.)

And more!

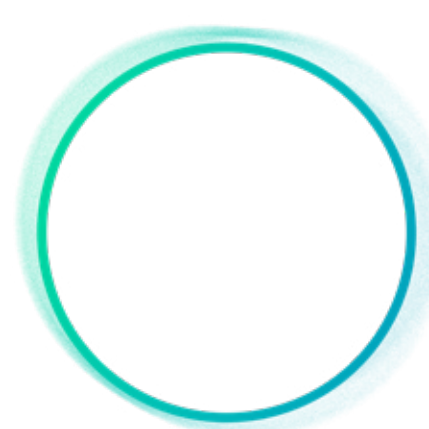

**Tip and get  
tipped for  
the value you  
provide**

# KASH integrations

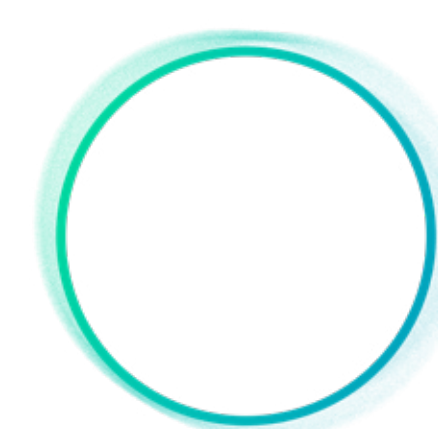

## Staking

Holding KASH get you more KASH. It's as simple as it is. Lock KASH in our staking ERC20 contract to receive passive income.

Rewards are decreasing in time to incentive the creation and growth of the initial network of users.

## Decentralized governance

If the decentralized web is the next big thing in tech, decentralized communities and organisations are the next big thing in the world. With KASH, everything is upgradable by voting - your voting power is reflected by your KASH. We want KASH to be decentralized, autonomous and flexible.
